

The Recruiting Committee for COMPANY

August 30, 2017

ADDRESS

CITY, STATE ZIP

Summer 2017 ROLE Application

About Me

I am an undergraduate at UC San Diego majoring in computer engineering. I was born and raised in the San Francisco Bay Area, where my family still lives. Growing up in the heart of Silicon Valley, I spent my early years tinkering with technology from operating systems to websites, and I never stopped. These experiences shaped my interest in software development, providing me with an extremely solid technical background that forms the basis of my desire to work for COMPANY.

In high school I elevated my passion for technology from a hobby to an ambition. I was extremely successful in founding and managing an engineering design organization at my school. For three years I directed multiple student teams in their efforts to compete in the San Jose Tech Challenge, helping our school win a total of four regional awards. I committed to the entire operational spectrum of my organization, from technical guidance and oversight all the way through compliance and executive management.

Since then, I have acquired substantial experience as an intern in diverse professional environments. During my senior year at high school, I worked as a content designer for a local tutoring firm to architect a full-length mathematics workbook. I spent my last summer as an intern at Synopsys, a S&P 500 technology company headquartered in Mountain View, California. At Synopsys, I architected a Perl command line interface that automates ticket creation for Synopsys's global IT department, and took the initiative to overhaul the existing automation system with an object-oriented approach that significantly reduced time-consuming API calls by over 65%. My experiences here have refined my skills in communication and problem solving while helping me confirm my enthusiasm to apply my skills as a summer intern at COMPANY.

Why COMPANY?

As a student who has excelled in courses ranging from psychology to economics to international relations, I value the diverse pursuits of COMPANY and hope to utilize my skills in technology with responsibilities outside the code base. With a track record of succeeding in both hands-on implementations as an engineer and important decision making as a manager, I have the knowledge and experience to strike the correct balance between technological and professional needs. Technically, I am fascinated by the ever more valuable data that COMPANY manages and collects, and I am eager to learn the specialized implementations behind COMPANY's robust technological infrastructure. And since it is clear that COMPANY has ambitious aspirations to make meaningful impacts with technology, as a ROLE I will cherish the responsibility to contribute towards that vision.

I also value the coordination between different roles within an organization, and I respect the inherent need to cooperate between teams to reduce risks and increase efficiency. I would really hope to come to work every day to a place where I know not only are my skills valued, but my personal philosophies as well. And after reflecting on your noble mission and admirable employee culture, I am absolutely confident that I would be an excellent fit as an intern at your CITY office.

Sincerely,

Winson Luk
